

Quality Attributes and Scenarios

Adaptability

Scenario 1

The system must be able to receive questions written in different formats as those are requested by the client.

Autonomy

Scenario 1: The application may run without input from an user.

Configurability:

Scenario 1

The system must allow the user to select the file to be loaded, as well as the format in which are written.

Scenario 2

The system must allow the user to change the name of the output file, as well as its language.

Reliability

Scenario 1

In the first phase, the one in which the internal representation is created, it is very important that the output has no failures. As stakeholders are not concerned by efficiency, non-perfect, fast algorithms are discouraged.
