

User manual

Getting started

Once started, the following window will appear, to allow us to choose the size of the board. As boards work well for any number of players, just choose considering if we want a shorter or longer match. Let's press any of the buttons to continue.

In this screen we'll choose the number of players who are going to play the match.

Once selected, the game will start.

Traversing the board

In the board we can see above we'll traverse through the boxes. In the top right corner we can see which player's turn is.

The dice is rolled automatically, so we only have to choose where to move by clicking the proper square we want to go to. We can see where we are allowed to move as some black frames will surround the permitted slots.

Our goal is to reach the boxes marked with a star, as when we do so, we'll be asked a question that, if we answer correctly, will earn us a point. If we get a punctuation of 4 we'll achieve victory.

Answering questions

Each time we reach a box, the window below will appear, asking us a question related with the category of the box:

Blue: Geography

Green: Science

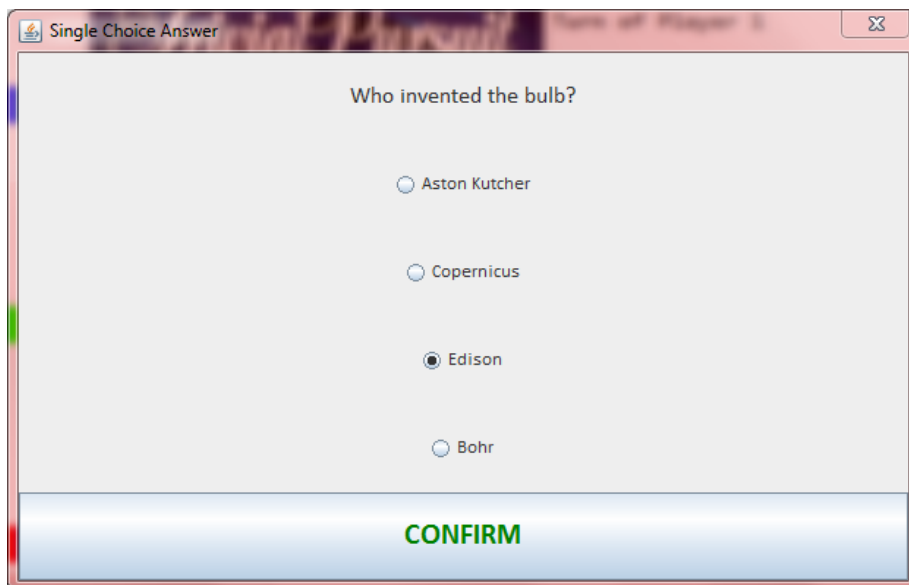

Red: Entertainment

Yellow: History

Pink and Grey: Random

If we answer correctly, it will still be our turn, and we will be able to move to another box. If we fail, it will be the turn of the next player.

Once someone wins the match, the application will shutdown.

Single Choice Answer

Who invented the bulb?

☐ Aston Kutcher

☐ Copernicus

☒ Edison

☐ Bohr
